## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art shows a actuator comprising: a displacement element, a displacement expander, a transmitter, a presser, a tip and a driver providing a drive signal that oscillates the displacement elements.

However, prior art fails to show a driver driving the displacement member element by providing a drive signal that oscillates the displacement element at a first phase angle and oscillates the displacement expander at a second phase angle substantially supplementary to the first phase angle thereby causing oscillation of the displacement element to be restrained by oscillations of the displacement expander. Prior art also fails to show, a second drive signal that oscillates the second displacement element at a third phase angle and oscillates the second displacement expander at a fourth phase angle substantially supplementary to the third phase angle, thereby causing oscillation of the first and second displacement element to be restrained by oscillation of the first and second displacement expander.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
